

DO YOU OFFER VESTIBULAR REHABILITATION IN YOUR CLINIC?

A pilot study exploring decisions to implement video consultations for vestibular rehabilitation.

We are looking for clinicians to take part in an interview to find out what they think about using video consultations for vestibular rehabilitation. Whether you use them regularly or have decided not to implement them, we are keen to hear your experiences.

Who is eligible?

- Qualified clinicians, of all professional groups, who perform vestibular rehabilitation clinically in patients with balance conditions.
- Work in the UK in the NHS or private practice.
- Be able to complete interview in English via Microsoft Teams or telephone.

Participation involves:

- A short online questionnaire used to select clinicians for interview.
- Some clinicians will be invited to an audio-recorded telephone or video interview lasting up to 60 minutes.
- Some participants may be asked to review their interview notes in a process called member checking.

For more information and to take part, please contact:
