# Vision VRA System

Guymark Vision Visual Reward Apparatus

The new generation Guymark VRA system has been redesigned to achieve better results and a more user friendly approach to Visual Reinforcement Audiometry. The system wirelessly communicates to reduce setup time and installation costs, it features a wireless keypad controller which operates up to 10 metres away.

The system menu has been updated to allow quick setup by the tester and give additional functions for easily tailored playlists.

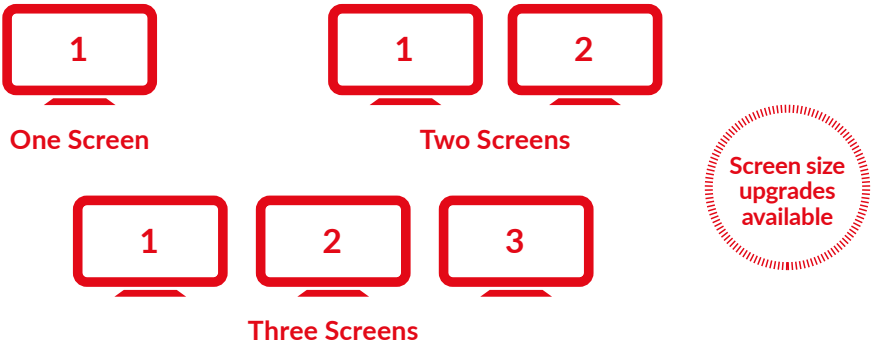

Key Features

- Wireless Operation & Controller
- 30 Animations Videos or Images
- 10 High Contrast Images
- Custom Playlists
- Easy Repeat Function
- Simple to Import Files
- Autotrim Large Videos
- Selectable Reinforcement Sound

Included in the system memory is 20 classic videos/images and 20 new videos/images. High Contrast images have also been added to enable effective testing on a wider range of patients. The addition of a repeat function has been implemented to achieve improved results. Importing videos and images is now much simpler within the menu, large video are automatically trimmed down

to 30 seconds. Sounds can be quickly enabled or disabled from the menu to aid testing. A help page is featured within the menu to assist with functionality and system setup. A settings page can also be accessed to help with initial system setup and allows the tester to customise keys to aid usability. The system is available with One, Two or Three screens and comes with a Guymark 24 month warranty.
