Comments from the 2013 Course Delegates

"A brilliantly organised course with great speakers."

"Very informative and fun."

"Highly recommended."

"An excellent course."

Cost of course: £298

Early booking is advised as places are limited

MIDDLESBROUGH AUDIOLOGY TRAINING

This course is for any Audiologist or Hearing Aid Practitioner who would like an update on current hearing aid technology and its clinical application, or who would like to develop their understanding in this area. No prior in-depth technical knowledge is required.

This course draws on the extensive expertise of the training staff who work for hearing aid manufacturers, and will include insights into the rationale behind the technology and its application. All five manufacturers who currently have hearing aids on NHS contract are teaching on the course.

The course consists of short talks (20-30 mins each). Topics include compression strategies, speech-in-noise processing, feedback management, directionality, prescriptive formulae, REM signals and protocols, test-box measurements, fitting profound and challenging hearing losses ... and much more.

There will be presentations on each manufacturer's NHS hearing aid range and the current features of these hearing aids. Short talks throughout the course will also give opportunity to reflect on key principles in hearing loss rehabilitation.

Please note: this course relates to adult hearing aid provision. It does not address paediatric provision, complex needs, or service management issues.

Accommodation

Accommodation costs are not included in the course fee.

There is a 'Premier Inn' adjacent to the hospital. A discount is available for delegates; details are available at the time of booking or on request.

We have a limited number of places in on-site accommodation (hospital residences) at a heavily discounted price. Places are limited; we advise booking soon to secure a place. Details available on request.

The course fee includes evening dinner on the Wednesday evening of the course.
